Conex OS Feature

Asset Telemetry Graphing

Not Another BMS - a Connected Viewer for the Entire Estate.

Conex OS Viewer gives FM and Business teams a single, live window in the entire estate, will drill down capability to a site or asset level. With all telemetry standardised, searchable and visualised in real-time, Viewer makes it simple to spot issues faster, make evidence-based decisions and determine portfolio performance at a glance.

How Does it Work?

Data Ingested
Data flows from BMS or IoT devices down to any required resolution.

Standardisation
Conex OS automates FM data governance in a consistent manner.

Unified and Graphed
Conex OS Viewer makes it simple to unify, graph and visualise all telemetry.

Searchable Interface
Easily search for any asset, device or store to interrogate performance telemetry.

Data Interrogation
Interrogate data to derive new insights and improve business decision-making.

Benefits

One View for Every Asset
Single interface to view and graphic telemetry regardless of data source.

Live and Historical Insights
See what's happening today, or what happened up to 7 years ago, securing audit trails and compliance.

Rapid Fault Detection
Layer asset performance scores to easily benchmark site performance and identify faults rapidly.

Portfolio Comparability
Standardise sites and devices like-for-like across the portfolio, enabling easy comparability between locations.

Data-driven Operational Confidence
Teams can stop relying on intuition and start relying on data-driven facts and figures to inform decisions.

Built for Non-data Experts
Easy-to-use interface built to make data accessible for both FM and Non-FM users.

OUTCOMES YOU CAN EXPECT

30 - 60%
Reduction in time to fault diagnosis through easily searchable and interrogable estate performance telemetry.

50 - 80%
Reduction in alarm noise through standardisation and filtering, enabling teams to focus on true issues.

2 - 5%
Uplift in asset uptime when paired with automation as issues are found earlier and fixer faster, maximising trading time.
